

Bing

Certainly! I've created a simple personal website for you using HTML, CSS, and placeholders for your biography, resume, and contact details. You can customize it further by replacing the placeholders with your actual information.

Here's the HTML code for your personal website:

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Your Personal Website</title>
  <style>
    body {
      font-family: Arial, sans-serif;
      margin: 0;
      padding: 0;
      background-color: #f7f7f7;
    }
    .container {
      max-width: 800px;
      margin: 0 auto;
      padding: 20px;
    }
    h1 {
      color: #333;
    }
    p {
      color: #666;
    }
    .contact {
      margin-top: 20px;
    }
  </style>
</head>
<body>
  <div class="container">
    <h1>Your Name</h1>
    <h2>Biography</h2>
    <p>Write a brief introduction about yourself here.</p>
    <h2>Resume</h2>
    <p>Download my resume <a href="resume.pdf" target="_blank">here</a>.</p>
    <h2>Contact Details</h2>
    <div class="contact">
      <p>Email: your@email.com</p>
      <p>Phone: +1 123-456-7890</p>
    </div>
  </div>
```

```
</div>  
</body>  
</html>
```

To use this code:

1. Save it as an HTML file (e.g., index.html).
2. Replace the placeholders with your actual information (name, biography, resume link, email, and phone number).
3. Create a resume.pdf file and place it in the same directory as your HTML file.

Feel free to customize the styling, add more sections, or include additional features as needed. Once you're ready, you can host this file on a web server or share it directly with others.

Remember to replace the placeholders with your real content, and your personal website will be ready to go! 🌟
